Class Notes 8

finish async task, attach detach, start and stop dialog

Build - process see slide 7 and 8 of programming_tips
debug,
strictly through IDE and ADB manages install, cannot put on Google play because not signed by key

release- minify enabled

takes you to where apk is

Can put on google play.(maybe do this)
I've put an app on drive, get it using your CNU account
Show install on phone

ADB - see slide 9 of programming_tips

can do a lot,from terminal

see what package manager can tell you
adb shell cmd package

tell me a little about the system running
adb shell 'pm list features'

how to uninstall a running app
1st get a sorted list of packages
adb shell 'pm list packages' | sort

then uninstall package you do not like
adb uninstall edu.cnu.nasa.lazerapplication

find a RUNNING process that has cnu in package name
adb shell ps |grep cnu

find all installed packages with cnu in name
adb shell 'pm list packages'|grep cnu

kill it (only wilh root permissions I think)
adb shell kill <pn>

or maybe install the apk I gave you without having to add an account?
adb install app.apk

Go over networked project

See Project 3 outline ppt
See project docs
